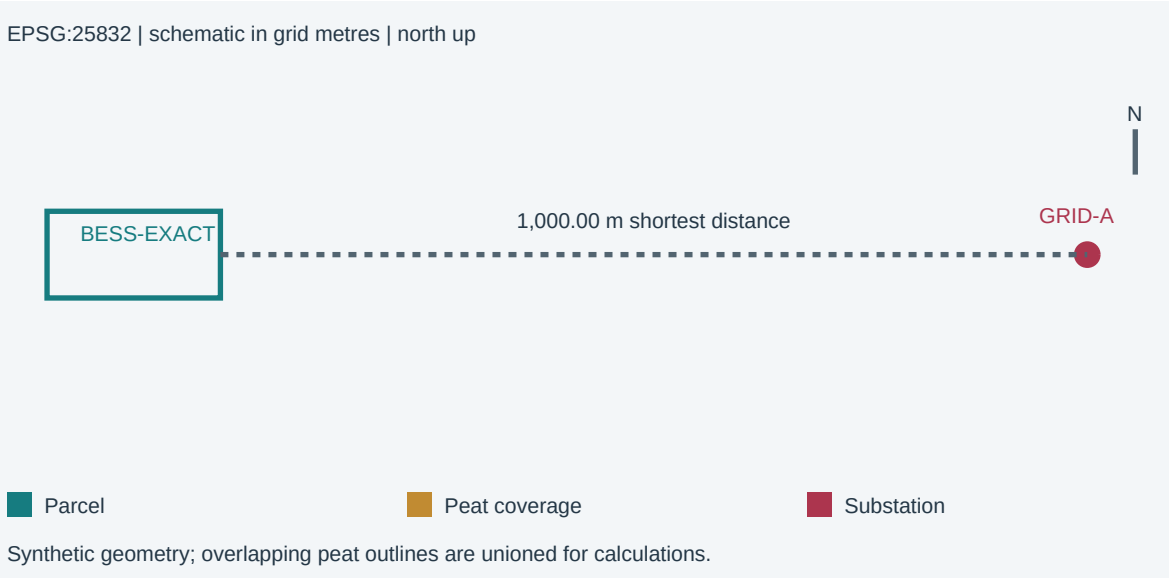
BESS prospecting report

DE / BESS-EXACT

SYNTHETIC DEMONSTRATION DATA - no real site or ownership claim

Parcel area	20,000.00 m2 / 2.0000 ha
Parcel source date	2026-01-15
Selected substation	GRID-A / 110 kV
Shortest distance	1,000.00 m
Qualifying rule	Area >= 2 ha; voltage >= 110 kV; distance <= 1,000 m



Why this candidate qualifies

All inclusive screening thresholds shown above are satisfied. Candidate selection is ordered by country and parcel identifier. The nearest eligible substation is selected; ties use source identifier.

Calculations and source evidence

Rule: iris-screening-1.0 | Run: 915f80e1-01e8-4ef4-b734-791d783b0ff3

Area: 20000 m2 / 10,000 = 2 ha. Distance: ST_Distance(parcel, substation) = 1000 m.

Assumptions and unverified attributes

Internal IRIS specifications unavailable; contracts in README are local assumptions.

EPSG:25832 (ETRS89 / UTM zone 32N), planar grid metres; suitable only for this pilot region.

Geometry types: polygon/multipolygon for parcels and peat; point for substations. No geometry repair performed.

Unknown source-date flag for candidate: False. Source accuracy and completeness are unverified.

Ownership, planning, grid capacity, connection permission, environmental eligibility and transferability are unverified.

Manifest in this output directory records input/output SHA-256 checksums, all validation evidence and candidate measurements.

Required uncertainty statement

Preliminary prospecting material. Figures, eco-point estimates and site suitability are indicative and based on available source data and commercial screening assumptions. The 8 eco-points/m2 factor is the current commercial baseline, not certified compensation. Ownership, planning, grid capacity, environmental eligibility and transferability remain subject to project-specific verification. No permit, reservation or construction readiness is represented.
